1500 kg 1800 kg 2000 kg

DIMENSIONS

C15/18/20s

$$A_{st} = Wa + x + l_6 + a$$

applies only if $\frac{b_{12}}{2} < b_{13}$

$$A_{st} = Wa + \sqrt{(l_6 + x)^2 + \left(\frac{b_{12}}{2} - b_{13}\right)^2} + a$$

applies only if $\frac{b_{12}}{2} \geq b_{13}$

$a = 200$

GENERAL DATA

Truck Capacities Capacity at different load centres

NOTE:
The listed capacities are valid only for the standard upright in vertical position with standard fork carriage and standard forks, up to max. lifting height of 3285mm.
The centre of gravity of the load may be displaced by max. 100mm against the longitudinal centre line of the truck.
Load centre is determined from top and front face of forks.
The values are based on a 1000mm, cube load configuration with the centre of gravity at the true centre of the cube.
With upright tilted forward lower capacity values are valid.
Attachments, longer forks, exceptional load dimensions and higher lifting heights may reduce the capacity.

Upright table C15/18/20s

*1) Optional with super-elastic tyres *2) Further lift heights see upright table *3) With 1.6 km/h *4) Without load at friction coefficient $\mu = 0.6$

*5) Height overheadguard with Radio +60m

PRODUCT DESCRIPTION

The C15-20s LPG forklifts are extremely robust and durable in design. Due to their compact dimensions, the trucks are suitable for both outdoor and indoor use. The low maintenance costs, the high availability as well as the long service life of the trucks make them an asset for all kind of companies.

Driver's Compartment

The driver accesses the operator compartment via a large, low, perforated non-slip metal step. A grab handle on the driver's side of entry makes it easy to climb up and down the truck. The floor covering in the footwell is made of non-slip material and ensures a high degree of slip resistance. The tiltable steering column and an easily adjustable comfort seat with excellent legroom ensure optimal adjustment to the driver's individual body size. The foot pedals are arranged in the same way as a car. The ergonomic control levers are smooth and predictable to operate, allowing the driver to concentrate on his work. The clear display shows the operating data in real time. A well-thought-out arrangement of chains and hoses on the mast provide the operator with a large field of vision. Easily accessible storage compartments and an intuitive, foot-operated parking brake complete the operator's station.

Engine, Transmission

The HMC 2.4 LPG engine complies with the EU exhaust gas regulations and is equipped with a 3-way catalytic converter as standard. The HMC LPG engine is durable and easy to maintain, as it has a timing chain. This engine variant is based on a continuously variable automatic CLARK powershift transmission. Together with the drive axle, this transmission forms a compact, powerful unit and is directly connected to the engine. The temperature of both the engine and the transmission is monitored. If limit values are exceeded, the engine is switched off for safety.

Brake System

A self-adjusting drum brake as a service and parking brake ensures high safety with minimal maintenance. Relaxed and concentrated work is possible, as only a small amount of force is required to apply the service brake.

Steering System

The hydrostatic power steering system makes steering easy, with full lock reached in just a few turns of the steering wheel. Road impacts on the steering wheel are absorbed. The steering axle is pendulum-mounted in rubber/steel elements. The short track rods require no adjustment and, together with the steering cylinder, guarantee precise and durable straight-line steering. The kingpins are mounted in lubricated taper roller bearings and the track rods in lubricated self-aligning bearings.

Hydraulic System

A full-flow return filtration system filters the oil on every return to the tank. Coarse particles are filtered directly via an intake filter and do not enter the oil circuit in the first place. This ensures the longevity of all hydraulic components. A high-performance pump supplies the oil for the mast functions and the hydrostatic steering. The steering circuit is primarily supplied via a flow distributor. The load is handled by a sensitive and precisely responding control valve. Additional safety is provided by the power break safety device, which prevents uncontrolled lowering of the load.

Upright

The clear-view masts are available in standard, hi-lo and triplex versions. The nested profiles provide high strength even under the heaviest loads. The inclined mast rollers are easily accessible for adjustment work. The tilt cylinders are mounted in self-aligning bearings, which increases the service life of the complete cylinder. An integrated tilt lock valve prevents the mast from tilting forward too quickly or unintentionally. The forks with hook suspension are forged and held in the desired position by adjustable locks. The CLARK mast damping reduces shocks and vibrations during the transition between the individual mast steps. This protects both the goods and the truck. The robust 6-roller fork carriage underlines the durability of this design even in tough applications.

Standard Equipment

Working lights, flashing lights at the front, pneumatic tyres, rear combination light with brake light and reversing light white, vinyl seat, paint in the bright safety colour „CLARK Green“, driver's compartment, lift mast and rims in black.

Additional Equipment

SE tyres (6.5 - 10), non-marking tyres (6.5 - 10), attachments, cab variants with heating, integrated or hook-on side shifts, additional hydraulic functions, quick-change couplings, rear-view mirrors, strobe lights, various seats, reversing handle with horn, swivelling gas bottle holder, vertical exhaust, additional storage compartment and much more.

Security

The C15-20s series is CE certified and complies with all European safety standards for industrial trucks.
